

## SupaLegacy iPhone / iPad setup guide

Please note: **Bee TV** can be installed and used on multiple mobile devices, and you can share your login details between them. The maximum number of devices in use at any time depends on your subscription level - so you could have **Bee TV** on an iPhone **and** iPad for the same price, as long as you only use **one** connection at a time (*a multiroom subscription allows separate devices to be used at the same time, and comes with a 50% discount per extra device, up to a total of FOUR devices per account*).

1. Go to your App Store (or tap [THIS LINK](#)), and download the [Supa Legacy IPTV](#) app for iOS (it's free).
2. Open the app. Decline the request to send you notifications, and also the request to track your activity across other apps.
3. Choose '**LOGIN VIA A CODE**' from the options you're given.
4. Use code **7070**.
5. On the next page, choose **MAIN** from the drop-down menu.
6. Fill in the **username** and **password** fields on the same page with the login details we've supplied, and tick the '**Remember me**' checkbox. If you don't yet have login details, please [ask](#) us for them! Finally, press the **LOGIN** button. After a few seconds, the service will work.

**ALL DONE!** You now have access to **Bee TV** on your iOS device... Enjoy!
